

Continuous Random Variables

- Uniform Distribution
- Normal Distribution

Lecture 9

01/30/2013

Turn on your clickers!

Discrete or Continuous?

- X = time you need to drive from Santa Barbara to Goleta

- (a) Discrete
- (b) Continuous

Turn on your clickers!

Discrete or Continuous?

- X = number of children in a family

- (a) Discrete
- (b) Continuous

Turn on your clickers!

$$X \sim U(0, 1)$$

- Compute the probability $\mathbb{P}(0.3 \leq X \leq 0.8)$.

- (a) 0.3
- (b) 0.5
- (c) 0.8
- (d) 1

Turn on your clickers!

$$X \sim U(2, 5)$$

- Compute the probability $\mathbb{P}(2 \leq X \leq 3.5 \text{ OR } 4 \leq X \leq 5)$.

- (a) $\frac{2.5}{3}$
- (b) 2.5
- (c) 0
- (d) $\frac{1}{3}$

Uniform pdf: $U(a, b)$

$$f(x) = \frac{1}{b-a}$$

Uniform pdf: $U(a, b)$

Computing Probabilities

$$\begin{aligned}\mathbb{P}(x < U < y) &= \text{Area} \\ &= \text{width} \times \text{height} \\ &= (y - x) \cdot \left(\frac{1}{b - a}\right)\end{aligned}$$

Total Area under the curve = 1

Example: *Waiting for the bus*

John takes the bus every day to go to class. The bus arrives at the stop punctually **every 30 minutes**. Assume that John is equally likely to arrive the bus stop at any time during the day. Let

$X = \{\text{the time (in minutes) that John has to wait for the bus}\}.$

- What is the probability that John waits less than 10 minutes?

Example: *Waiting for the bus*

- X is a *continuous* random variable that takes values in $(0, 30)$
- Since *all waiting times are equally likely*, the random variable

$$X \sim U(0, 30)$$

Pdf of X :

Example: *Waiting for the bus*

- The area under the density curve between 0 and 10 represents the probability $\mathbb{P}(X \leq 10)$, i.e. the probability that John waits less than 10 minutes.

$$\mathbb{P}(X \leq 10) = \text{Base} \times \text{Height} = 10 \times \frac{1}{30} = \frac{1}{3}.$$

Example: *Waiting for the bus*

John takes the bus every day to go to class. The bus arrives at the stop punctually **every 30 minutes**. Assume that John is equally likely to arrive the bus stop at any time during the day. Let

$X = \{\text{the time (in minutes) that John has to wait for the bus}\}.$

- What is the probability that John waits between 0 and 30 minutes?

- (a) 0
- (b) $1/30$
- (c) 1
- (d) $1/3$

Example: *Waiting for the bus*

John takes the bus every day to go to class. The bus arrives at the stop punctually **every 30 minutes**. Assume that John is equally likely to arrive the bus stop at any time during the day. Let

$X = \{\text{the time (in minutes) that John has to wait for the bus}\}.$

- What is the probability that John waits between 0 and 30 minutes?

Example: *Waiting for the bus*

John takes the bus every day to go to class. The bus arrives at the stop punctually **every 30 minutes**. Assume that John is equally likely to arrive the bus stop at any time during the day. Let

$X = \{\text{the time (in minutes) that John has to wait for the bus}\}.$

● What is the probability that John waits more than 10 minutes?

- (a) $2/3$
- (b) $1/30$
- (c) 1
- (d) $1/3$

Example: *Waiting for the bus*

John takes the bus every day to go to class. The bus arrives at the stop punctually **every 30 minutes**. Assume that John is equally likely to arrive the bus stop at any time during the day. Let

$X = \{\text{the time (in minutes) that John has to wait for the bus}\}.$

- What is the probability that John waits more than 10 minutes?

$$\mathbb{P}(X > 10) = 20 \times \frac{1}{30} = \frac{2}{3}.$$

$$\mathbb{P}(X > 10) = 1 - \mathbb{P}(X < 10) = 1 - \frac{1}{3} = \frac{2}{3}.$$

Expected Value of a Uniform

Center of Gravity of the Density

$$\mathbb{E}(U) = \frac{b + a}{2}$$

Cumulative Distribution Function (CDF)

- Another description of probability function
- $F(x) = \mathbb{P}(U \leq x)$
- $F(x)$ is equal to the area under the curve up to x
- For $U \sim U[a, b]$:

$$F(x) = \mathbb{P}(U \leq x) = \frac{x - a}{b - a}$$

Cumulative Distribution Function (generally)

- X is a continuous random variable
- $F(x) = \mathbb{P}(X \leq x)$ (definition)

Probability	Calculate using the CDF
$\mathbb{P}(X \leq x)$	$= F(x)$
$\mathbb{P}(x \leq X \leq y)$	$= F(y) - F(x)$
$\mathbb{P}(X \geq x)$	$= 1 - F(x)$

Probability Density Function

$$P(\text{Interval}) = \text{Area under density function}$$

The Normal Distribution

Standard Normal PDF

- $X \sim N(0, 1)$
- X has mean zero and variance 1.

Standard Normal PDF

$$P(-1 < X < 1) = 0.68$$

Standard Normal PDF

$$P(-2 < X < 2) = 0.95$$

Standard Normal PDF

$$P(-3 < X < 3) = 0.997$$

Standard Normal PDF

Standard Normal: $Z \sim \mathcal{N}(0, 1)$

- $\mathbb{E}(Z) = 0$
- $\text{Var}(Z) = 1$
- $\mathbb{P}(-1 < Z < 1) = 0.68$
- $\mathbb{P}(-2 < Z < 2) = 0.95$
- $\mathbb{P}(-3 < Z < 3) = 0.997$

Standard Normal: $Z \sim \mathcal{N}(0, 1)$

Turn on your clickers!

$$\mathbb{P}(Z = 0) = ??$$

- (a) 0
- (b) 0.68
- (c) 0.95
- (d) 0.997
- (e) 1

Standard Normal: $Z \sim \mathcal{N}(0, 1)$

Turn on your clickers!

$$\mathbb{P}(Z \leq 0) = ??$$

- (a) 0 (b) 0.5 (c) 0.68
(d) 0.95 (e) 0.997

Cumulative Distribution Function (CDF)

- When $Z \sim \mathcal{N}(0, 1)$

$$\mathbb{P}(Z \leq z) = \Phi(z)$$

- We are going to use the letter “ Φ ” in the case of the standard normal distribution.

Table of Standard Normal Probabilities for Negative Z-scores

Note that the probabilities given in this table represent the area to the LEFT of the z-score.

The area to the RIGHT of a z-score = 1 – the area to the LEFT of the z-score

Compute $\mathbb{P}(Z < 1.53)$

How to compute other probabilities

$$\mathbb{P}(Z > 1.53) = ??$$

$$\text{Recall } \mathbb{P}(A^c) = 1 - \mathbb{P}(A)$$

$$\mathbb{P}(Z > 1.53) = 1 - \mathbb{P}(Z < 1.53) = 1 - 0.9370 = 0.0630$$

$$\mathbb{P}(Z < -z) = \mathbb{P}(Z > z)$$

The normal pdf is **Symmetric!**

$$\mathbb{P}\{Z > 1.53\} = \mathbb{P}\{Z < -1.53\} = 0.0630$$

Intervals: $\mathbb{P}(a \leq Z \leq b)$

$$\mathbb{P}(a \leq Z \leq b) = \mathbb{P}(Z \leq b) - \mathbb{P}(Z \leq a) = \Phi(b) - \Phi(a)$$

- Find both probabilities
- Subtract the smaller from the larger

Example

$$\begin{aligned}\mathbb{P}(-1.65 < Z < 1.53) &= \mathbb{P}(Z < 1.53) - \mathbb{P}(Z < -1.65) \\ &= 0.9370 - 0.0495 \\ &= 0.8875\end{aligned}$$
